EQUELLA 6.3 QA3 release

Pearson has recently released EQUELLA 6.3 QA3. This release includes all the features and fixes that were provided in the 6.3 QA2 release plus additional issue fixes. We recommend upgrading your test environment to this version for testing prior to deployment in your production environment.

Resolved issues

The following issues have been resolved in this release since EQUELLA 6.3 QA2. This list contains issues that were reported by clients, and those found by our quality assurance team.

API

- The */usermanagement/local/role/* endpoint would only return a count of the available roles, and not include a list of the roles themselves.
- The */usermanagement/local/xx* endpoints all now require EDIT_USER_MANAGEMENT privileges to access, even for read access.

Contribution

- Google have switched off their old YouTube search API and now only allow use of the latest YouTube Data API (v3) which requires a Google API key to be obtained. A new *Google API* option on the *Settings* page allows a Google API key to be stored in EQUELLA. If the Google API key is not configured in EQUELLA, existing YouTube links will continue to open and play. However, searching for new YouTube content during contribution and editing existing content will no longer work until an API key is entered.

Searching

- Cloud search results began displaying an error screen on the 11th of May.

Resources

- If a user was granted VIEW_RESTRICTED_ATTACHMENT permission at any level, including on a specific resource, they would be able to see restricted attachments in the attachments list on any resource. The user would not be able to view or download the restricted attachments that they were not granted permissions for, as expected.
- Using "Select all results in this search" would not select results that were included in the search results due to matches in the attachment content.

Integration

- When attempting to activate a copyright attachment during an integration session an error would be displayed if the course ID sent from the integration did not match an existing course in EQUELLA.
- Blackboard connectors now work against Blackboard installations using self-signed certificates.

Workflow

- Changing the workflow on a collection could leave some resources in an inconsistent workflow state.

Institution administration

- Importing institutions could fail on SQL Server databases if the institution contained URLs that required checking.

General

- `com.tle.core.tasks.RemoveDeletedItems.daysBeforeRemoval` and `com.tle.core.tasks.RemoveOldAuditLogs.daysBeforeRemoval` were being removed from the *<equella>/learningedge-config/optional-config.properties* file (if configured) upon upgrade from versions 6.1 and earlier.

Known issues

- The Office to HTML conversion service is not compatible with 64-bit architecture based servers and should be disabled on these machines via settings in */path/to/equella/learningedge-config/optional-config.properties.*
- Google Chrome and Safari running on Apple OS X do not allow users to drag and drop files onto the File Manager applet. The File Manager applet provides an action on the toolbar to select and upload files.

Supported environments

Supported environments information for EQUELLA 6.3 QA3 can be found at
